22850 7590 02/26/2009 OBLON, SPIVAK, MCCLELLAND MAIER & NEUSTADT, P.C. 1940 DUKE STREET ALEXANDRIA, VA 22314			EXAMINER BLOUIN, MARK S	
			ART UNIT 2627	PAPER NUMBER
			NOTIFICATION DATE 02/26/2009	DELIVERY MODE ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com
oblonpat@oblon.com
jgardner@oblon.com

<i>Office Action Summary</i>	Application No.	Applicant(s)	
	10/568,582	KIKUKAWA ET AL.	
	Examiner	Art Unit	
	MARK BLOUIN	2627	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 November 2008.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 and 11-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6 and 11-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Detailed Action

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 and 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shingai et al (USPub 2005/0041568) in view of Nishiuchi et al (US 2004/0223445).
3. Regarding Claim 1, Shingai et al shows (Figs. 1-6) an optical recording medium comprising: a substrate (11), a noble-metal oxide layer (12) provided on the substrate, a first dielectric layer (16) provided on a light-incidence plane side when viewed from the noble-metal layer and a second dielectric layer (13) provided on the side opposite to the light-incidence plane when viewed from the noble-metal oxide layer, the second dielectric layer containing ZnS or a mixture of ZnS and SiO₂ as a main component [0048], wherein the proportion of ZnS to the sum of ZnS and SiO₂ is set at a value from 60 mole % to 100 mole %, but does not show the noble metal as an oxide.

Nishiuchi et al shows [0078] the use of an oxide as well as several other materials to form a reproduction layer.

Shingai does not set forth the material combination of a noble metal oxide. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the noble metal layer of Shingai with the oxide of Nishiuchi et al through routine experimentation and optimization in the absence of criticality. More particularly, where the

Art Unit: 2627

general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. In re Swain et al, 33 CCPA (Patents) 1250, 156 F.2d 239 70 USPQ 412; Minnesota Mining and Mfg. Co. v Coe, 69 App. D.C. 217, 99 F. 2d 986, 38 USPQ 213; Allen et al. v Coe, 77 App. D.C. 324, 135 F. 2d 11, 57 USPQ 136.

The rationale is as follows: One of ordinary skill in the art would have been motivated to provide the noble metal layer of Shingai with the oxide of Nishiuchi et al since it would be an art equivalent engineering choice of materials producing the same results.

4. Regarding Claim 2, Shingai et al shows (Figs. 1-6) an optical recording medium, further comprising, on the side opposite to the light-incidence plane when viewed from the second dielectric layer (13), a light absorption layer (14) and a third dielectric layer (15) arranged in this order when viewed from the second dielectric layer.

5. Regarding Claim 3, Shingai et al shows (Figs. 1-6) an optical recording medium, further comprising a reflective layer (12) provided between the substrate and the third dielectric layer (15).

6. Regarding Claim 4, Shingai et al in view of Nishiuchi et al shows (Figs. 1-6), all the features described, supra, but does not show an optical recording medium, wherein the noble-metal oxide layer contains platinum oxide (PtOx).

Shingai does not set forth the material of Platinum. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the noble metal oxide layer of Shingai with the claimed materials through routine experimentation and optimization in the absence of criticality. More particularly, where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable

Art Unit: 2627

ranges by routine experimentation. In re Swain et al, 33 CCPA (Patents) 1250, 156 F.2d 239 70 USPQ 412; Minnesota Mining and Mfg. Co. v Coe, 69 App. D.C. 217, 99 F. 2d 986, 38 USPQ 213; Allen et al. v Coe, 77 App. D.C. 324, 135 F. 2d 11, 57 USPQ 136.

The rationale is as follows: One of ordinary skill in the art would have been motivated to provide the noble metal oxide layer of Shingai with platinum since it is a substitution of noble metals and would provide the same effect.

7. Regarding Claims 5, 11, and 12, Shingai et al in view of Nishiuchi et al shows (Figs. 1-6) an optical recording medium, wherein the light absorption layer contains as a main component a material which can be represented by $(\text{Sb}_a\text{Te}_{1-a})_{1-b}\text{MA}_b$ (wherein MA is an element other than antimony (Sb) and tellurium (Te), $0 < a < 1$ and $0 \leq b < 1$), and besides which is different from an intermetallic compound represented by $\{(\text{GeTe})_c(\text{Sb}_2\text{Te}_3)_{1-c}\}_d\text{MB}_{1-d}$ (wherein MB is an element other than antimony (Sb), tellurium (Te) and germanium (Ge), c is 1/3, 1/2 or 2/3, and $0 < d \leq 1$) (see [0052]).

8. Regarding Claims 6, 13, and 14, Shingai et al shows (Figs. 1-6) an optical recording medium, wherein a light-transmitting layer (18) having the light-incidence plane is further provided on the side opposite to the substrate (11) side when viewed from the first dielectric layer, the substrate is from 0.6 mm to 2.0 mm [0047] in thickness and the light-transmitting layer is from 10 μm to 200 μm in thickness [0047].

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Blouin whose telephone number is 571-272-7583. The examiner can normally be reached on M-F from 6:00 to 3:30 pm.

Art Unit: 2627

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Joe Feild, can be reached on 571-272-4090. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
